GO ICE 180

Technical Specification:

- Daily Production 180 Kg.
- Bin Capacity 65 Kg.
- Power 220-240 Volt @ 50 Hz e 60 Hz.
- Average Current 5.3 Amp.
- Maximum Power Consumption: 1163 Watt.
- Ice Type: Cube.
- Air Cooling.
- Dimension: 100cm (Width) x 86cm (Depth) x 200cm (Height).
- Weight 375 Kg.

Features:

- Semi-Auto Bagging System.
- Coin, Bill machines and Exchange System.
- GSM Module with management System.
- Adjustable ice price and volume set by owner.
- Environment protection refrigerant.
- Bacteria Killing Light: Ultra Violet UV-C 253.7 nm wavelength.
- Certificate water filter system.
- Modular Design, easy maintenance.
- CE, ISO 9001/2000 e ISO 14000
- LCD 17 " Screen Integrated.

Hyper-filtration or reverse osmosis:

The system uses non-toxic materials authorized for food use and suitable for drinking water. It consists of five steps of purification:

- 1) The water of the water network undergoes a first microfiltration cartridge 10 μ M of microfiber (polypropylene) for the disposal of solid residues;
- 2) After the water meets the active carbon cartridge 'carbon block' of 10 mM which allows you to remove chlorine, organic and inorganic molecules, including those that give flavor and odor to the water;
- 3) The third step is similar to the first one but this time the cartridge is of 5 microns.
- 4) This is the hyper filtration true, on the osmotic membrane, which allows to block almost all dissolved ions, lowering the amount below 30 parts per million, less than 3 ° F (French degrees).
- 5) The last step in the osmotic water is disinfected with ultraviolet lamps (UVC) to eliminate any type of organism which might survive until then.

Placement Possibilities

- ✓ Convenience Stores
- ✓ Camping
- ✓ Gas Stations
- ✓ Marinas
- ✓ Parking Areas
- ✓ Car Wash
- ✓ Liquor Stores
- ✓ Etc..

Example of profitability

➤ GO ICE 180

- **Estimated Sales and annual income:**

- Average of 40 bags a day in **Summer period** (4 months).
- Average of 5 bags a day **Rest of the year**.
- Price of 3€ a bag of 3kg of ice

Summer e

Summer period: 40(bags per day) x 3 (eur per bag) x 120(days, 4 summer months) = 14.400€

Rest of the year: 10 (bags per day) x 3 (eur per bag) x 245 (days, 8 months) = 7.350€

Total annual gross income:..... 21.750€

- **Maintenance expenses:**

- Purification filters.....100€
- Bags.....725€

- **Total annual net income:**

- Income.....21.750€
- Expenses.....825€

➤ **Total net income.....20.925€**

* Calculation based on one vending machine.

** The selling production capacity of the machine is 4 times higher than the example given.
